

MECHANICAL SERVICES ENGINEERS & CONTRACTORS

Glasgow Dental School Infrastructure Works

The Glasgow Dental Hospital School part of the Greater Glasgow & Clyde NHS Trust, it is the pre-eminent centre for specialist oral health care, education and research in West and Central Scotland

The Dental Hospital and University of Glasgow Dental School collaborate to provide first-rate training for under- and post-graduate dental education. It is also home to the Emergency Dental Treatment Centre.

The Infrastructure project has replaced and upgraded several of the essential building services elements to the building that ensure a safe and comfortable working environment for staff, students and patients alike

PROJECT CHALLENGES

The project had one significant obstacle in that the rooftop located chillers had to be lifted from the busy city centre of Glasgow. We arrange all details of road closures and traffic management/diversions with Glasgow City Council, the provision of 100 ton mobile crane. The lift was arranged for early Sunday morning and with the professional and thorough approach to the detail the operation was successfully complete in the early morning time slot without incident
